

What's behind these doors is amazing

Apeer doors do not bow, twist or warp.

The solid 'thwump' when you close an Apeer door sounds like no other. It's a sound that signals superior construction, a reinforced frame and virtually airtight seals.

Standard on all Apeer doors:

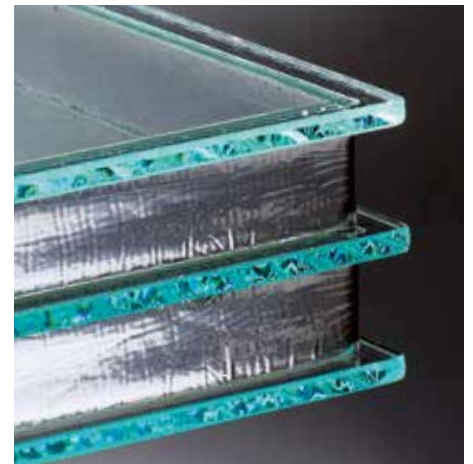

- Energy saving A-rated doors.
- Internal wire mesh reinforcing.
- 70mm thick, double seal, double security.
- Steel reinforcing bar in internal frame.
- Door sash and inner frame made from high strength fibreglass, no bowing.
- Hinge bolts for additional protection.
- Colour options unlimited.
- Matching glass available.
- Even our triple glazed units are thicker than a normal 44mm door.

Internal wire mesh reinforcing.

Steel reinforcing bar in internal frame with a double draft seal.

Even our triple glazed units are thicker than a normal 44mm door.

Hinge bolts for additional protection.

Door sash and inner frame made from high strength fibreglass, no bowing.

Colour options unlimited. Matching glass available.
